

AI Usage Note

What AI Helped With

Rapid UI Layout Building

Accelerated the creation of the Streamlit web application dashboard by efficiently configuring multi-tab segmented content containers and sidebar input properties.

Backend API Integration

Provided optimized structure handling for FastAPI, enabling asynchronous REST payload transmissions from the web frontend without blocking user interaction threads.

Array Formatting and Mapping

Constructed custom Python methods to parse raw JSON dictionary loops into clean plain-text string streams, preventing raw code dictionary structures from displaying inside the presentation panes.

What AI Got Wrong

Streamlit State Management Reset

Initial code iterations mistakenly caused the text generation view to clear out unexpectedly upon clicking other navigation links because elements were not correctly cached in the `st.session_state` dictionary.

Unrendered Formatting Identifiers

Applied raw markdown formatting tags inside the web text frames where Streamlit required explicit markdown printing methods, resulting in unrefined layout strings on screen.

Schema Parsing Exceptions

Early structural mapping attempts generated rigid Pydantic validation schemas that crashed on minor backend variations before a fallback data handler method was introduced.

Best Prompts Used

Prompt 1 – Interface State Tracking Fix

“Fix the Streamlit interface re-rendering reset problem by ensuring that the generated test suite arrays are kept securely inside the session state object so they stay visible when interacting with the web page tabs.”

Prompt 2 – Data Cleaner

“Create a text formatter function in Python that safely checks if the AI output is a dictionary array or list, extracts the title and steps keys dynamically, and appends plain text lines to avoid printing raw dictionary elements to a text widget.”

Prompt 3 – Multi-Tab Core Routing

“Write a clean Streamlit dashboard implementation with an `st.sidebar` requirement input pane and a main container area with a three-tab layout covering Test Cases, Acceptance Criteria, and Gherkin Specs.”
